The first step is to identify the main points of the text. This involves reading through the text and highlighting the key information. The next step is to organize this information into a logical order. This can be done by creating a list of points or a flowchart. The final step is to write up the notes in a clear and concise manner. This involves using simple language and avoiding unnecessary detail.

It is important to remember that notes should be a summary of the text, not a copy of it. They should be written in your own words and should focus on the most important information.

There are several different methods for taking notes. Some people prefer to write in a notebook, while others prefer to use a computer. The most important thing is to find a method that works for you. Some people like to write in a notebook because it is easy to carry around and they can write quickly. Others prefer to use a computer because they can edit their notes and they can search for information easily.

There are also several different techniques for taking notes. Some people like to write in a notebook, while others prefer to use a computer. The most important thing is to find a method that works for you.

One of the most common techniques is to write in a notebook. This involves writing down the main points of the text in a notebook. This is a simple and effective way to take notes. Another technique is to use a computer. This involves typing up the main points of the text on a computer. This is a more formal way of taking notes, but it is also more organized.

There are also several different techniques for taking notes. Some people like to write in a notebook, while others prefer to use a computer. The most important thing is to find a method that works for you.

Another technique is to use a computer. This involves typing up the main points of the text on a computer. This is a more formal way of taking notes, but it is also more organized. A third technique is to use a notebook. This involves writing down the main points of the text in a notebook. This is a simple and effective way to take notes.

ABOUT THIS MANUAL

GENERAL

This manual has been created to inform Harley-Davidson technicians about the construction of Harley-Davidson products and the latest tested and approved maintenance and repair techniques.

MANUAL LAYOUT

Safety

Refer to the Safety section before performing any procedures on a vehicle.

Sections

This service manual is organized into chapters, sections and topics. Each section is laid out in the following manner:

- Prepare
- Remove
- Install
- Disassemble (if applicable)
- Clean/Inspect (if applicable)
- Assemble (if applicable)
- Complete

Topics

The purpose of the **Prepare** topics is to provide an outline of procedures required before beginning a specific task. Links to the necessary procedures are provided in the topic.

The **Remove** and **Install** topics allow the technician to only remove and install the component - which may be all that is required. If a component can be repaired, **Disassemble**, **Assemble** and **Clean/Inspect** topics are provided as appropriate.

Complete topics provide a list of procedures that need to be performed to return the vehicle to ride-ready condition. If additional removal procedures need to be performed, move to the next section without performing the Complete topics in the current section.

Procedural Steps

Each topic contains steps to complete the procedure. These steps are laid out in numeric and alpha steps.

The purpose of the numeric steps is to provide the experienced technician with high-level information to complete the procedure.

The alpha steps provide a less-experienced technician with step-by-step instructions to perform the procedure.

Symbol Identification

Symbols are used in some graphics to provide information about parts. Refer to Table i-1 for symbol definitions.

Table i-1. Symbols

Symbol	Description
	Apply Lubricant: Indicates a part that should be lubricated during installation.
	Discard/Do Not Reuse: Indicates a part that must be replaced with a new part during installation.
	Apply Sealant: Indicates a part that must be installed with a threadlocker or sealant.
	Special Tool: Indicates that a special tool is recommended.
	Measure: Indicates a part that should be measured or gauged to verify that it is within specification.

HOW TO USE THIS SERVICE MANUAL

Cross-References and Page Numbers

A cross-reference shown as **2.2 SPECIFICATIONS** refers to chapter 2 CHASSIS, heading 2.2 SPECIFICATIONS.

All pages contain a chapter number followed by a page number. For example, **page 3-5** refers to page 5 in Chapter 3.

Item References and Quantities

In figure legends and tables, the number in parentheses that follows the part name indicates the quantity of that part necessary for one complete assembly.

Example:

2. Rocker cover screw (4)

In a procedure step or paragraph, the number in parentheses that follows a part name indicates the legend item of the part in the figure referenced by the text.

Example:

1. Remove rocker cover screws (2).

Acronyms and Abbreviations

Acronyms and abbreviations are used in this document. See the B.4 GLOSSARY for a list of acronyms, abbreviations and definitions.

PREPARATION FOR SERVICE

- Start each job with a clean work area.
- Clean the motorcycle before work begins.
- Gather any tools, instruments and parts needed for the job before work begins.
- Carefully read all related service information, including service bulletins, before service work begins.

It's a preview. You can download the full file by clicking the link below.
