#### NOTE!

Basic data must always be collected and error codes and parameters must always be checked before the basic check is started; see <a href="Troubleshooting">Troubleshooting</a>, <a href="general">general</a>.

Basic check is performed on each main system. The purpose of the basic check is that it shall give quick and certain information about the status in the sub-system included in each main system.

Each basic check is divided into a number of checks to be performed in order.

If the basic check does not help to locate the cause of the malfunction, the information obtained helps as guidance for continued troubleshooting together with other service information.

The basic check(s) to be performed is determined by the information obtained when the basic data was collected; see <u>Collection</u> of basic data.

### **Basic checks:**

- O <u>Engine</u>, basic check
- O <u>Electrical system, basic check</u>
- O <u>Power transmission, basic check</u>
- O Brake system, basic check
- O <u>Parking brake, basic check</u>
- O <u>Steering and hydraulics, basic check</u>

## **Explosion hazard**

When a battery is being charged, an explosive mixture of oxygen and hydrogen is formed. A short circuit, open flame or spark near the battery can cause a powerful explosion. Always turn off the charging current before disconnecting the charging clamps. Ventilate well, especially if the battery is charged in a confined space.

## **Corrosive sulphuric acid**

The battery electrolyte contains corrosive sulphuric acid. Electrolyte spilled on bare skin must be removed immediately. Wash with soap and plenty of water. If electrolyte gets into your eyes or any other sensitive body part, rinse immediately with plenty of water and seek immediate medical attention.

Maintain the best possible cleanliness when working on these systems. Wipe off all pipe and hose connections before disconnecting and remove paint flakes, etc. Plug all pipes, hoses, cylinders, etc. immediately after disconnecting. Never install a hydraulic hose which has not been plugged until it has been thoroughly cleaned.

For electric welding on the machine or on attachments on machine:

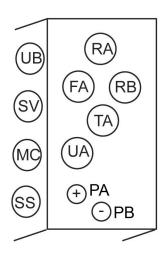

- O voltage feed turned off with battery disconnect switch
- O all connectors in the cab's rear wall shall be unplugged to avoid damaging the machine's electronics.

#### NOTE!

Ground the welding unit as close as possible to the welding point.

Welding on the cab is not permitted, it affects the cab's approval for FOPS and ROPS.
